

**INSTALLATION INSTRUCTIONS:**

\_Installation must be carried out by a qualified electrician.

\_Before installing, make sure that mains is switched off.

\_Before connecting, observe and be sure that polarity (+) is stated correctly, you are connecting the right driver and most importantly driver is set to OFF position! If either of these elements do not meet the requirements prior to connections will cause irreparable damage to LED.

\_LED s are sensitive to misuse and inappropriate installation. If in spite of all precautions, damage to LED occurred, contact LIGHTSON to discuss further actions. Do not try to fix or replace components without consulting our engineer, this may cause extra damage to your fixture and potentially charges.
